The new Wildlife XP 10x44 and 8x44 binoculars: See True Colours

Hours of waiting and observing are the discomforts a birdwatcher and nature observer has to deal with. Our new Wildlife XP 10x44 and 8x44 binoculars prove that this can also be a pleasure. Ease of handling and high performance are the attributes that describe best the new members of the Wildlife XP series. Thus, they ensure successful observation in every situation – at top class observation comfort.

The greatest advantage of the new binoculars is the newly developed Steiner Ultra-High-Definition optics that provides an exact detail resolution and optimised contrast by using high-quality glass combined with highest manufacturing precision. The Steiner Ultra-HD optics offers true colours and a high-class light transmission. The XL-field of view delivers a perfect overview of up to 130 meters. The 3-D brilliance is reflected in impressive sculptural images and allows a superb depth of field.

All the elements of the new Rapid-Precision-Focus-System guarantee rapid focussing and highest precision. Using the Steiner Precision-Setting – with dual dioptré adjustment – a setting of both eyes separately ensures a customised setting and thus compensates for an even better vision. The Steiner Fast-Close-Focus allows for a fast and convenient focusing as close as 2 metres. The tested and proven Distance-Control-System guarantees a faster recognition thanks to the pre-setting of the distance.

The award-winning, user-friendly design and the proven Comfort-Balance-System guarantee most comfortable and pleasant handling. The Steiner ComfortGrip offers specially shaped thumb rests that offer an extremely comfortable fit and are invaluable especially during

long-term observations. The patented Steiner Twist-Up Eyecups easily adjust for optimal exit pupil distance to ensure a full XL-field of view— even for spectacle wearers.

The legendary Steiner ruggedness is manifested in the new Wildlife XP 10x44 and 8x44. The highly impact-resistant housing material and rugged construction make the Wildlife XP models extremely shock resistant, versatile and light. The nitrogen pressure filling via the patented 2-way-valve technology prevents the formation of condensation and internal fogging. With a temperature tolerance from -40°C to +80°C you will always have clear sight for a reliable use even in tropical or arctic climes. The binoculars are waterproof to up to 5 meters. The proven thin and hydrophobic surface finishing – the so-called Steiner Nano-Protection® - ensures that the lenses are protected from dirt or water. Even rain or snow disappear immediately from the field of vision and the lenses are very easy to clean – for a reliable clear view.

The new Wildlife XP models will be obtainable at special retailers for € 1.699 for the 8x44 and € 1.749 for the 10x44 in October 2014. Included in the delivery is a soft carrying case, a neoprene carrying strap, objective covers and a rain protection cap.
